

PRODUCT BROCHURE

IRIS Asset Management

Track, optimize, and control assets across their lifecycle—from procurement and tagging to maintenance and retirement.

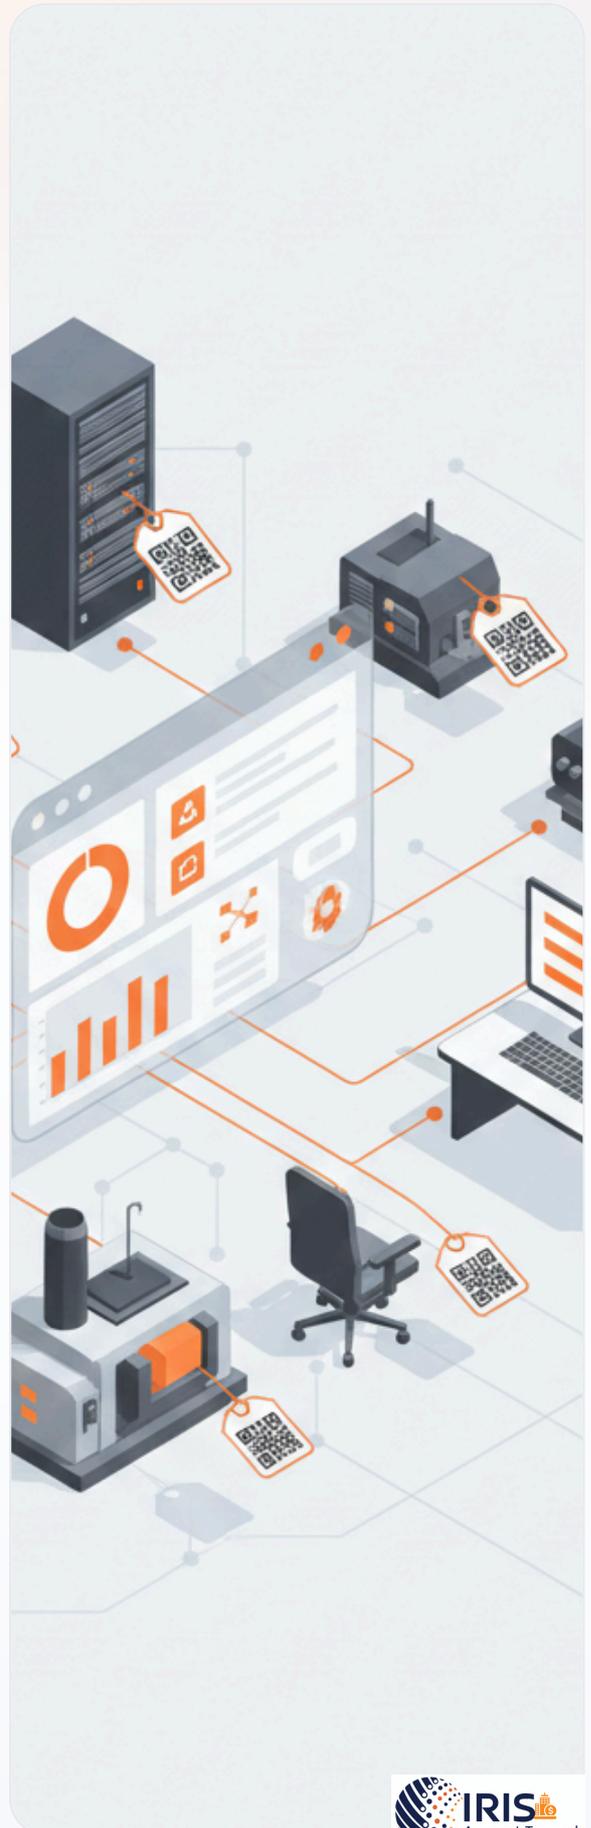

Centralized asset registry

Lifecycle visibility

Maintenance scheduling

Compliance & audit trail

Analytics dashboards

Manage Every Asset, End to End

IRIS AssetTrack Asset Management gives teams a single source of truth for asset ownership, location, condition, and cost—supporting day-to-day operations, audits, and strategic planning.

↑ Utilization

Improve asset availability and reduce idle time with visibility and accountability.

↓ Loss & Leakage

Reduce missing assets through tagging, check-in/out tracking, and audit readiness.

↓ Downtime

Plan preventive maintenance and keep critical equipment operational.

Designed for Operational Teams

- Fast searching, filtering, and status reporting
- Clear ownership and location history
- Role-based access and approvals

Built for Audit & Compliance

- Complete asset history and change log
- Documentation-ready reports
- Consistent governance across sites

Core Capabilities

Six key modules that help you track, maintain, and optimize your assets.

Asset Registry & Tracking

- Centralized inventory and status
- Ownership and location visibility
- Quick audits with tags

Lifecycle Management

- Procurement-to-retirement coverage
- Standardize processes and controls
- Better replacement planning

Maintenance & Scheduling

- Preventive maintenance calendars
- Service history per asset
- Alerts and reminders

Dashboards & Analytics

- KPI views for utilization & cost
- Trends, outliers, and insights
- Exportable reports

Compliance & Audit Trail

- Traceable approvals and changes
- Audit-ready documentation
- Governance by role

Mobile Scanning

- QR/barcode scanning workflows
- Faster field verification
- Instant updates on-site

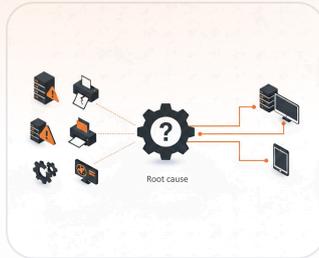

From Asset Visibility to Service Reliability

IRIS AssetTrack extends asset management with integrated service management practices, ensuring issues are resolved quickly and root causes are eliminated across all asset types — IT, facilities, fleet, tools, and machinery.

Incident Management

- Log incidents against any asset
- Asset-linked issue tracking
- SLA-based prioritization and escalation
- Vendor and maintenance routing
- Downtime and impact tracking

Problem Management

- Identify recurring incidents
- Link incidents to root causes
- Structured root cause analysis
- Known errors and workarounds
- Prevent repeat failures

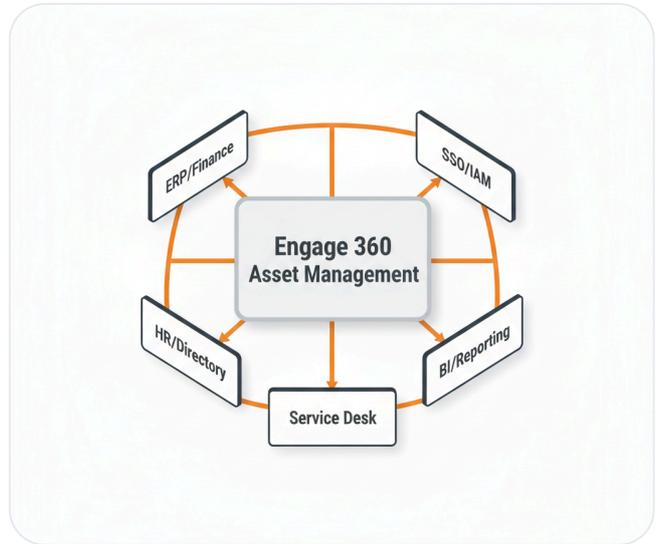

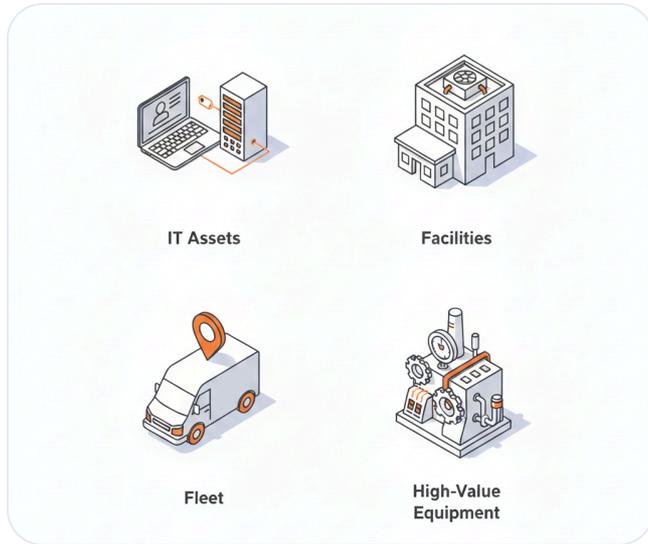

Continuous Improvement

- Incident trends drive action
- Problems feed maintenance plans
- Improved reliability
- Reduced downtime

Use Cases & Integrations

Fit for IT, facilities, fleet, and high-value equipment—integrated into your enterprise ecosystem.
